

# Sustainability Management Consulting

Kick-Starting Your Company's Sustainability

## The Economy Under Pressure To Act

Today, climate protection and compliance with climate targets require companies to fundamentally rethink their strategy. Upcoming laws and directives as well as requirements from investors and other stakeholders are also increasing the pressure on small and medium-sized companies to deal with sustainability issues.

On 01.01.2022, the EU-Taxonomy regulation came into force. It requires companies, which fall under the CSR Directive 2014/95/EU, to disclose information in their non-financial statements on how and to what extent a company's activities are linked to environmentally sustainable economic activities.

In the coming reporting year 2023, the new Corporate Sustainability Reporting Directive (CSRD) will expand and replace the existing CSR reporting obligation. Its compliance will be mandatory for all companies within the EU with 250 or more employees.

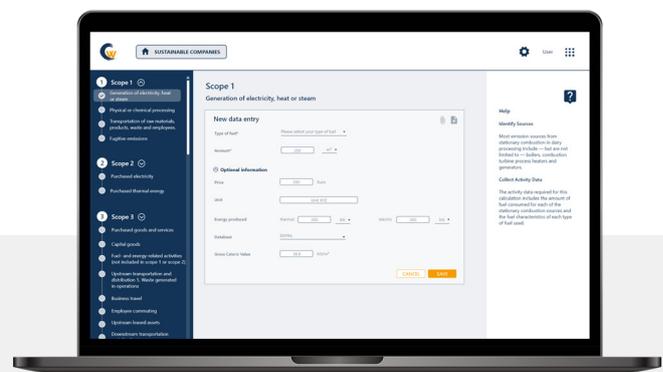

WAVES consults companies within the EU with tailor-made sustainability solutions. We offer the required skill set and tools to get companies prepared and compliant with these new directives and minimize their risk. Furthermore, we support companies, which take their first professional steps into managing their corporate sustainability, with the development of sustainability knowledge and the effective use of dedicated automated tools.

*We follow an individual and personal consulting approach with a genuine interest in providing companies with the solution that best suits their sustainability requirements. We consult independently of the situation, whether managers are dealing with sustainability topics for the first time and need to prepare their first reports or if a company has already set off to become climate-neutral. We also provide management expertise when it comes to integrating sustainability more strongly into business processes.*

**Armin Neises**  
WAVES CEO

In addition, our certified and award-winning Sustainability Management Platform (SMP) calculates performance indicators such as the carbon footprint, presents the results in easy-to-understand dashboards for more transparency and lets companies actively manage and control their sustainability KPIs.

## Creating Added Value

*WAVES provided us with excellent advice on the topic of „sustainability management in the company“ and gave us a solid understanding of the meaning, purpose and methods.*

*The team responded to our individual requirements as a transport company, so that we were able to initiate the appropriate strategic measures to align our company more strongly in the direction of sustainability, thus enabling us to focus on our sustainability indicators in the long term.*

## Tailor-made Sustainability Reporting

### Driving Success Through Know-How And An Innovative Software Solution

- ✔ **TARGET-ORIENTED SERVICES**  
We specifically address individual needs and offer project management in the sense of a full-service agency or we can assist internal teams and already ongoing projects with our expertise.
- ✔ **EXPERTS IN SUSTAINABILITY AND DIGITIZATION**  
We combine many years of consulting expertise in different disciplines with the latest digital solutions on the „SMP“ (Sustainability Management Platform).

- ✔ **COMPLIANCE**  
We apply the latest standards, methods and guidelines for compliance and deliver the required knowledge and certified tools to achieve reliable results for standard-compliant reporting.
- ✔ **START-UP AID**  
We provide initial information on how to get started with sustainability, CSR reporting and other topics around a company's sustainability.
- ✔ **CONTINUOUS MANAGEMENT**  
Managing sustainability effectively is a continuous process and not a topic to be dealt with once a year. We deliver helpful ideas and create momentum to improve a company's sustainability through continuous monitoring and management to achieve climate goals in the long term.
- ✔ **NETWORK OF EXPERTS**  
We cooperate with a network of industry-specific consultants and develop a solution tailored to a company's individual needs.
- ✔ **BECOME A SUSTAINABILITY CHAMPION**  
In our workshops we describe with practical examples how managers can steer their company and employees towards more sustainability and highlight, which sustainability criteria are important and should be taken into account in the future. Furthermore we give managers guidance on how to create awareness for sustainability aspects in their area of responsibility.

## Our Services

### EU-Taxonomy

**Basics, meaning, evaluation criteria and areas of application of the EU-Taxonomy for companies.**

The EU-Taxonomy categorises companies with regard to sector-specific sustainability aspects. This is done via various assessment criteria standardised by the EU, with a direct reference to the corporate financial flows.

The taxonomy obligation currently relates to selected sectors and company sizes and will be successively expanded by the EU.

### Climate Jump-Start

**Our „Climate Check“ offers orientation and a professional introduction to sustainability aspects, carbon management and dealing with greenhouse gases.**

On the basis of the „Climate Check“ we provide companies with the necessary assistance to prepare themselves for legal and customer requirements and explain how to integrate digitalisation and climate management cost-efficiently in a company's business model.

### Climate Reporting

**Status quo analysis and data collection as a basis for software-based carbon management or standardised CSR reporting according to GHG Protocol.**

Climate reporting provides information on which activities contribute to what extent to a company's carbon footprint.

The results open up fields of action to reduce CO<sub>2</sub> emissions and enable every company to make a contribution to achieving climate goals.

### Sustainability Management

**Practical applications and methods for managers and professionals.**

Learn how to fulfill managerial responsibility for sustainability aspects. By using practical examples, managers will receive professional guidance and insights into methods of how sustainability management can be successfully integrated into processes and decisions across all levels within a company.
